

DONAUER & PROBST

**The DonPro[®] method
for the internal repair
of drinking water pipes**

Philosophy

Our most precious resource

Our most precious resource

Epitome of purity, primary matter of evolution, mythical element in many cultures, a precious rarity in many parts of the world: water – by far our most important foodstuff.

Today, water is one of the best controlled and cleanest foodstuffs in Germany. In many cases, however, the control of water stops at the private house connection. Often, the excellent quality of the drinking water is negatively impacted by contaminations in the water pipes. Corrosion, heavy metals and bacteria – all these pathogens turn our water taps into a focus of disease. In addition to this, old pipes are often completely clogged up due to calcification and – even aggravating the situation – many years of corrosion result in burst pipes with often extremely expensive consequences.

Thanks to our protected DonPro® method certified to DIN EN ISO 9001:2008, we are able to solve your water problems without cost-intensive chiselling – quickly, cleanly and sustainably.

Donauer & Probst

Philosophy

Cleanliness is given
top priority when
repairing water
pipes in hospitals

Systematic pipe repair – unique and ingenious

The solution we have all been looking for

A method – successfully applied for many years – ensures sustainable results

Technique

durable

Pipe repair à la Donauer & Probst is based on a principle that is as simple as ingenious: sand is blasted through the clogged pipes, thus cleaning them and taking off all lime deposits. Then, the inside of the pipe is coated with an epoxy resin that has been especially developed for this purpose. This coating acts like a new pipe within the old pipe that effectively and durably prevents new corrosion and calcification.

clean

A significant advantage of our method is that it does not cause any dirt. It is not necessary to remove and replace the old supply pipes and have plasterers, painters or tilers coming.

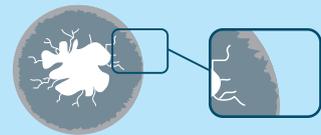

fast

In addition to this, the method is also very quick. The pipe repair work in a detached house, for example, will normally not take more than three to five days. During this period, we, of course, can install an emergency water supply system to cover your daily water demand.

Cross-section

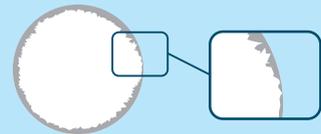

1

The pipe before the repair

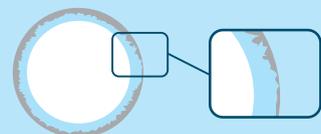

2

The pipe after sandblasting

3

The pipe after coating

The solution

low-cost

All these benefits make it possible for the owner of a property to achieve considerable cost-savings. In comparison with the installation of new water pipes, internal pipe repair by Donauer & Probst is considerably less cost-intensive.

ecofriendly

As regards environmental friendliness, we make highest demands on our system. No chemicals are used for the cleaning of the pipes. The only material that we use here is a fine-grained special sand to remove the deposits even in the most inaccessible corners of the pipe system. The material used for coating the pipes meets all standards with respect to health protection.

reliable

The quality of our work safeguards sustainable success. To this end, we monitor each individual working step by means of endoscopy. Already at the beginning of the repair work, looking into the pipe system gives us an overview of the damage. Before finishing our work, we check the proper execution of the repair. We offer our customers the reliability of a durable solution and can, like for new pipes, give them a 5-year guarantee.

Choosing our repair method means choosing a clean solution of your water problems.

certified

Donauer & Probst has been certified to DIN EN ISO 9001:2008.

Technique

Intensive inspections before and after the repair work serve to safeguard our success

Our success speaks for itself

From the bungalow to the tower block

The DonPro® method is also successfully applied outside Germany. The customer base of Donauer & Probst includes private house owners as well as the American Armed Forces, numerous local building authorities, church institutions, large companies and housing associations.

In the past few years, Donauer & Probst successfully renovated and restored more than 1,000 objects ranging from detached houses to buildings with more than 500 living units and over 20 floors.

Benefit from clean and healthy water, an ingenious repair system, the performance of a skilful trade and the stable value of your property. Rely on us and feel free to contact us for more detailed information!
